

Stormwater Pollution Prevention Plans and Spill Prevention Control and Countermeasures Plans

Client Name: Pillowtex (Fieldcrest Cannon Inc.)

Kannapolis, NC

The work for Pillowtex involved the planning and implementation of corporation wide Stormwater Pollution Prevention Plans (SPPP) and Spill Prevention Control and Countermeasures (SPCC) Plans. This work was completed at 9 textile plant facilities in four states in the southeastern US. The work was to make initial site visits to each facility, interview plant managers and personnel about operations, map the oil and chemical storage areas, map surface water movement, and prepare draft and final Integrated Spill Plans for each site. The work was completed within time and budget constraints required by the regulators and client.

In addition, Pyramid provided on-site spill awareness training for operations and management personnel. The travel to each facility was arranged as a single circuit through multiple states and coordination of the meetings was managed by Pyramid. The meetings were successful in training personnel at each facility on the spill plan and response procedures and documentation to comply with regulations.
